Trees/Medicine - Trees
Medicines - Nicotinic Acid

The Influence of Adenine and Nicotinic Acid
on the Secondary Vegetation of Bekhara Almond
Trees (Amygdalus Bucharia Kerzh.). M. I. Matveyev,
K. Ye. Ovcharov, Bot Inst, Tadzhik Affiliate,
Inst Plant Physiol imeni K. A. Timiryazov, Acad
Sci USSR, 4 pp

"Bot Ak Nauk SSSR" Vol LXV, No 3

Concludes that adenine and nicotinic acid stimulate
opening of leaf buds and growth of leaves and sprouts
in Bekhara almond trees, which allows the plant to

39/49770

USSR/Medicine (Contd.)

Mar 49

continue vegetation through the second half of the
summer. Action on growth processes of almond trees
differs slightly, but both may be used to change
the established biological rhythm of the trees.
Submitted by Acad N. A. Maksimov, 27 Jan 49.

Leaf removal by 1-naphthylacetic acid from *Ficus carica* and *Punica granatum*. M. I. Matyska. *Doklady Akad. Nauk S.S.S.R.* 72, 189 (1960). Smearing the plants with 1% ointment of naphthylacetic acid in lanolin and cosmetic cream gave a rapid defoliating action within 2-3 weeks. The former plant was most affected by 1-2% concns., the latter by 1%. The former plant lost leaves definitely above the application points, the latter showed a more diffused effect. G. M. Kosolapoff

ORIG. PUB. : Len i konoplya, 1958, 1, 23-26

ABSTRACT : Svetoch variety was first adapted regionally in 1932-1936 and in 1956 it occupied in this country more than one half of the area of selected flax fibers (53%). In 1929, separated from a box sowing, was plant No. 1577 - the parental plant of Svetoch variety. The origin of the primary specimen has remained unknown. In subsequent trials, Svetoch demonstrated its resistance to rust and proved to be resistant to damping off and fusariosis. In 1935, it already became feasible to sow the new variety (numbered 1577) at the flax seed growing kolkhoz "Svetoch" in Kalinin oblast' and in 1936, variety 1577 was regionally

"These Particulars of Success Mining," H. I. Matveyev,
Mining Eng., 5 27

Page No 2

Many frequently engineers are not well enough acquainted with methods of traverse setting and thus waste much of the time in open-pit mining. Author presents several methods to achieve higher efficiency. Also gives several methods of working, and cross-cut method of working of veins, method of vertical cutting, and method of working underground and precious veins. Describes methods for traverse mining are considered in method methods for traverse mining are considered in

Effect of gaseous hydrochloric acid on paracetamol crystals. N. I. MAKININ. <i>Chem. Ind. (Moscow)</i> 1950-51 (1950).—Loss of wt. of paracetamol crystals when exposed to gaseous HCl at 25° is found to be enough to introduce considerable error in the data of W. As a probable explanation, formation of HCl is offered. HCl is volatile at the temp. of the crystals freeze.

*A New Method for Determining Aluminium Oxide in Aluminium. N. N. Murach, N. I. Matveyev, N. I. Novykhin, and T. A. Makarovskaya (Yekaterinburg Metallurgical Institute, Yekaterinburg, 1940, (2), 298-300; Khim. Refert. Zhur., 1941, 6, (5), 69; C. Abn., 1943, 37, 2934).—[In Russian.] The determination is carried out in a special apparatus for hot extraction. Place 2-3 gm. of the metal sample and 0.2 gm. of $HgCl_2$, wrapped in 0.20 dry ashless filter in the cartridge of the apparatus, put the cartridge in a flask containing the required amount of alcohol (propyl, butyl or isamyl). Fit the condenser with a $CaCl_2$ tube. Dissolve the sample by heating on an electric plate, wash the residue (in the cartridge) with absolute alcohol from a special dropping funnel, cool, transfer the filter to a crucible, dry, ignite (obtaining Al_2O_3 with a number of ir soluble substances), and determine Al_2O_3 by the usual method.
